

KAKATIYA MEDICAL COLLEGE, HANUMKONDA

DEPT. OF COMMUNITY MEDICINE

FREE MEDICAL CAMP

FAMILY ADOPTION PROGRAMME

On March 28, 2026, Kakatiya Medical College organized a remarkable community outreach initiative at BAOPET, combining MBBS 2025 A batch **Family Adoption Programme** with a **Free Medical Camp**. This event highlighted the institution's commitment to social responsibility, healthcare accessibility, and holistic community development.

Objective:

- To Provide **accessible healthcare services** to rural residents who may lack regular medical facilities
- Improve rural health equity by assigning medical students to families for continuous monitoring and support.

Organization and Support:

A medical camp was successfully organized under the Family Adoption Program by the Department of Community Medicine at Kakatiya Medical College, Warangal. The program was conducted under the guidance of Principal Dr. Sandhya Sunkaraneni, led by Head of the Department Dr. Sreedhar and Professor Dr. Murali.

Services Offered:

General health check-ups (blood pressure, diabetes, anemia)

**Specialist consultations
(Orthopedics, General medicine, Ophthalmology)**

Free Drugs distribution and health education about preventive care to the local residents by our students.

Conclusion:

The Family Adoption Programme (FAP) and free medical camps at Baopet represent two complementary approaches to strengthening rural healthcare.

FAP ensures continuity of care by embedding medical students into families, fostering long-term relationships, preventive health practices, and early detection of chronic conditions.

- Free medical camps provide immediate relief by offering accessible consultations, medicines, and awareness sessions to entire communities, especially those with limited access to hospitals.

Together, they create a dual impact:

- Sustainable health equity through ongoing family monitoring.
- Quick, high-impact interventions through community-wide medical camps.

The synergy between these initiatives demonstrates that healthcare is most effective when both continuity and accessibility are prioritized. By combining long-term engagement with short-term outreach, these programs not only treat illness but also build healthier, more resilient communities.
